✉ pandeyaryendra76@gmail.com    ☎ +91-9109875121    in aryendra-pandey    📄 broskifoo

## Skills

**Programming:** Python, C++, JavaScript, SQL

**Backend & Software:** FastAPI, REST APIs, Git, Linux

**AI / ML:** PyTorch, YOLOv8, OpenCV, LLMs, ChromaDB

**Web Technologies:** Next.js, TypeScript, React, Tailwind CSS

**Tools & Platforms:** GitHub, CUDA, Splunk, Wireshark

## Experience

### Software Developer Intern

April 2026 – May 2026

*Tridit Digital*

- Developed AEM content components, templates, and publishing workflows for an enterprise web platform.
- Implemented automated content tagging and personalization within AEM pipelines, reducing manual editorial effort.

### IT Infrastructure Intern

June 2026 – Present

*XtraNet Technologies Limited, Bhopal*

- Administered enterprise network infrastructure covering system configuration, fault diagnosis, and client-side issue resolution.
- Supported server environment operations, maintaining uptime and reliability of production systems.

## Projects

### Brain Tumor Detection — Hardware-Aware Inference Optimization

[github/Brain](#)

- Trained YOLOv8n on 7,200 MRI scans across 4 tumor classes, achieving **89.18% mAP@0.5** with CUDA-accelerated inference at **6.23 ms/image** on an RTX 3050 GPU.
- Applied FP32 → INT8 static quantization reducing model size by **47.89%** (5.94 MB → 3.09 MB) with only 0.48% mAP drop, confirming edge deployment feasibility.
- Deployed a Streamlit diagnostic dashboard with LayerCAM explainability and IoU scoring for visual model verification.

### NeuroSentry — Log-Based Threat Detection System

[github/Neurosentry](#)

- Built a modular threat detection pipeline: ingested system/audit logs, engineered behavioral features, and applied an ML classifier for near real-time anomaly detection.
- Built a FastAPI backend with REST endpoints for log ingestion, feature extraction, and inference; served results to a React + Vite dashboard with live alerts and event statistics.

### SoTrail — AI Travel Planning Platform

[github/SoTrail](#)

- Engineered a FastAPI backend with a RAG-based retrieval layer using ChromaDB for vector search and an LLM-powered chatbot for personalized travel recommendations.
- Integrated Amadeus API for live flight and hotel data; built a Next.js + TypeScript frontend with itinerary planner, chatbot panel, and trip analytics.

### QoS Degradation Predictor — Network Systems ML

[github/QoS](#)

- Implemented a time-driven packet-switched network simulator in C++17 with multi-flow FIFO queues; trained a logistic regression model on simulated traffic metrics for QoS degradation detection.

## Education

### Manipal Institute of Technology, MAHE

2023 – Present

*B.Tech — Electronics and Communication Engineering*

- Coursework:** Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, Object-Oriented Programming, Machine Learning

## Certifications

- [Google Cybersecurity Professional Certificate](#)
- [AWS Cloud Practitioner](#)
- [Meta Front-End Development](#)
- [Meta JavaScript Programming](#)
